

## Quick Guide to Green Open Access

This guide helps you to make your research publications open access when:

- Your paper is not covered by one of the open access agreements (look up journals here)
- You have not published with an open access publisher

Green open access means that you upload an accepted author manuscript in SDU's repository, Pure. The manuscript will then be public at once or after an embargo through SDU's Research Portal. According to the SDU Open Science Policy you are strongly encouraged to archive your accepted manuscript version in Pure. SDU Library offers to check terms of sharing and to upload correctly in Pure if you send your manuscript and relevant tables and figures to <a href="mailto:puresupport@bib.sdu.dk">puresupport@bib.sdu.dk</a>.

## What is an accepted manuscript?

An accepted manuscript is a peer reviewed manuscript of your article. When the manuscript is ultimately accepted after peer review corrections, your latest version is the accepted manuscript. This can be a word document you have on your computer.

If you make sure to save your final manuscript with a clear file name when it is accepted, it is easy to find it later.

Introduction

Why be concerned about inequality? Much recent theorizing and empirical investigation of the politics and social dynamics of inequality has either failed to successfully address or answer this question. Why is it that we consider more inequality and less inequality good? On this question, contemporary inequality scholars find themselves in somewhat of a dilumna. On the one hand, it seems that our concern with inequalities does not atem from relative differences per as, but is derived unther from our moral distributance with underlying poverty (Fediation 1999). But on the other hand, we other floor unerbox truthed by significant inequalities cere in the absence of any absolute poverty (Atkinson 2015; Kenworthy 2008). Consequently, scholars of political inequality are on shaby ground when it comes to the explaining of their theoretical grounds for concern with inequality, and the standard move is to set noise the normative part of this question and to justify the concern with inequality merely on the negative consequences of large conomnic inequalities for society as a whole (tense and Van Kersbergen 2016; Wilkinson and Pickett 2010; Kenworthy 2008). Despite that this might well be enough to justify political action to reduce inequality this standard move is theoretical insequality. And explain a consistent normative or empirical account, our strong concern with inequality.

This article offers a way out of this delemma for scholars of inequality. It bridges normative political theorizing and empirically informed perspectives on political inequality and thereby offers a coherors account of why we care about inequality. More specifically, it elaborates a political applicating version of the sufficiency view—indebted to the theorizing of Harry Frankfurt (1997; 2015) and Roger Crite (2003)—and applies this view to the set of reasses given in the empirical alternative oppose inequality. Thus, impertuntly, it is not the aim of this article to argue that inequalities are not mentally problematic, or to ar

Most journals allow you to upload an early version of your article to your institutional repository.

How and when an accepted manuscript can be uploaded is usually part of the publisher's standard policy.

This is also included in the copyright transfer agreement you sign with the publisher.

If you are not the corresponding author of the publication it can be necessary to contact one of your coauthors to obtain the final manuscript version.

Once you have located the peer reviewed manuscript, we recommend that you send it to the Pure Team while stating that it is the peer reviewed manuscript you are sending.

## What happens after I send my manuscript to the Pure Team?

At SDU the Team Pure makes sure to examine the conditions that exists for sharing through Pure with the exact journal you have published with. We will also correctly upload your manuscript.

Your manuscript will often be subject to an embargo period. This means that we will upload your manuscript to Pure at once but public access to the document is given later. The embargo period can vary.

When the manuscript is made public it will carry a frontpage with correct citation and link to the final version with the publisher.

If you have questions regarding Open Access or Pure and would like to know which of your articles you can pursue green open access with, we are ready to help at <a href="mailto:pursuegreen">pursuegreen</a> open access with, we are ready to help at <a href="mailto:pursuegreen">pursuegreen</a> open access with, we are ready to help at <a href="mailto:pursuegreen">pursuegreen</a> open access with, we are ready to help at <a href="mailto:pursuegreen">pursuegreen</a> open access with, we are ready to help at <a href="mailto:pursuegreen">pursuegreen</a> open access with, we are ready to help at <a href="mailto:pursuegreen">pursuegreen</a> open access with, we are ready to help at <a href="mailto:pursuegreen">pursuegreen</a> open access with, we are ready to help at <a href="mailto:pursuegreen">pursuegreen</a> open access with, we are ready to help at <a href="mailto:pursuegreen">pursuegreen</a> open access with a pursuegreen open access with a pursuegre
