One particular aspect of multilingu... interaction that I want to emphasize is its multimodal and multisensory nature. I elaborate on two related concepts: Translanguaging Space and Translanguaging Instinct, to underscore the necessity to bridge the artificial and ideological divides between the so-called sociocultural and the cognitive approaches to Translanguaging practices. In doing so, I respond to some of the criticisms and confusions about the notion of Translanguaging.

Alternative Sources

You can remove the primary source and switch to an alternative

There could be times when the matching source is not what you expected it to be. No worries! Our system displays the source it deems as most relevant, but keeps overlapping matches as "alternatives", i.e. other sources which contains similarities to this particular block of text.

If you wish to view the alternative matching text, click on alternative sources under the source link or "View alternatives" under the hidden menu.

Including an alternative match will automatically remove the primary match, which will be sent to the bin. You can at any time revert this action by restoring it from the bin.

I want to emphasize one particular aspect of multiling
interaction which is its multimodal and multisensory
related concepts: Translanguaging Space and Transla
underscore the necessity to bridge the artificial and i
the so-called sociocultural and the cognitive approac
practices. In doing so, I respond to some of the critic
the notion of Translanguaging.

SWITCH TO AN ALTERNATIVE OVERLAPPING MATCH

We display the matches our system deems as most relevant. However, you can chose to remove the primary match and include alternative overlapping matches instead. An overlapping match is also a match to this particular section of text but from a source our system has ranked as less relevant.

Select one of the levels below and the matches in it will be set as primary, meaning that they will be included in the report. The current primary match will be sent to the waste bin.

○ **LEVEL 1**
Contains overlapping matches from 1 other source(s) ⌄

○ **LEVEL 2**
Contains overlapping matches from 2 other source(s) ⌄

SAVE AND CONTINUE   CANCEL

Switch to an Alternative Overlapping Match

Choose which one to include

If clicking on "View alternatives", you will get the option to choose which alternative source to include.

Alternative matches are bundled in what we call levels, since an overlap could actually be matches from several sources. Expand the level to see which sources are in it and choose which one to include instead.

I want to emphasize one particular aspect of multilingual langua
interaction which is its multimodal and multisensory nature. I ela
related concepts: Translanguaging Space and Translanguaging I
underscore the necessity to bridge the artificial and ideological
the so-called sociocultural and the cognitive approaches to Tra
practices. In doing so, I respond to some of the criticisms and c
the notion of Translanguaging.

The dangers of Diving

The Greek archipelago, this nautical Ede   free and a
Lego box of undiscovered treasures and   ut now at
last recovered" by the renowned free div   ven, but it
is one that is controlled and checked very hard by the Greek authorities and its naval forces, although the situation is beginning to improve.

John D. Ive, PhD Hist. at Cornell summarizes in Modern Aquatic Archeology And Other Naval Gazing 2012 (2) (trans.) The reduced protectionism around the Mediterranean "Just over seven years ago, the Greek authorities finally easing up on their firm ban of SCUBA diving. Their strict approach was based, wisely so, on the fact that there are archaeological treasures basically everywhere in the Aegean seas. Now they have given some authorized diving center permission to dive on a few selected sites. Diving Center Crete and Adventure Blue are the two most famous dive centers in the area. "

One of the dive sites is located off the island of Thodorou where permission to dive in an area where a German Messerschmitt plane crashed during the Battle of Crete during World War II in 1941(3) has been recently granted.

Although planes from WWII could be considered ancient by some so do not feel the Greek authorities that there is any immediate danger to the Greek cultural treasures for scuba divers visiting that particular site. It has namely made sure to clear the area of every single gadget of archaeological value before being released until the grasshoppers. It is unfortunately the case that, too often, if not almost always, or perhaps even always, picked souvenirs from the seabed, be it from wrecks or sunken columns and dropped fishing lines. It is also why this ban on scuba diving has been in place for so long. It is said that Jaque Yves Cousteau was immediately ported from Athens Underwater Archaeology Museum after they realized the consequences of his and Gagnan's invention of the "aqua lung" would it become adopted by a general populace. (4)

What is decompression sickness?

Decompression sickness, by many referred to as "the bends" or "diving sickness", is triggered when bubbles of nitrogen forms in the blood and tissue of a body. These bubbles follow when a person rises from deep water to shallow water, where the pressure is lower, too quickly.

1 / 11	STUDENT'S ASSIGNMENT	INCLUDE IN REPORT ✓

The diver may complain of vertigo or headache, unusual fatigue or tiredness. He or she may have a rash, pain in one or more joints, muscular weakness or tingling in the arms or legs or paralysis. Less often; shock, difficulties with breathing, unconsciousness or death may be seen. The symptoms generally appear in a relatively short period after completing the dive. Almost 50 per cent of divers develop symptoms within the first hour after the dive, 90 per cent within six hours and 98 per cent within the first 24 hours. (5) In practice this means symptoms that appear more than 24 hours after the dive are probably not decompression sickness. An exception is if the diver has travelled in an aircraft or has been travelling in the mountains. Under these circumstances, low pressure can still trigger decompression sickness more than 24 hours after the last dive. As a result, it is wise not to fly within 24 hours of a deep dive.
