

# Filesharing with AD Tier servers and ES accounts

Filesharing between client PC and SDU server is done with the ImportExport-fileshare. The share can be reached from the client pc, once connected to VPN, and from the SDU-server.

The address for the ImportExport-fileshare is \\C.SDU.DK\MGT\ES

Open File Explorer and write the address in the address bar. Here you will see a folder with your initials.

**!NB** The share is only intended for importing/exporting files. Content should be deleted when files have been shared. Once a week the content will automatic be deleted with no warning.

Tip: Import files on server

- Download to own pc -> Transfer
- Kopier fil til lokalt download folder
- Unblock file, from file properties
