

Mac Office repair

Gem alle dine åbne Office dokumenter og luk dem. Gå ind **Mac softwarecenter**, det kan du gøre ved at trykke på **Command tasten + mellemrumstasten** så kommer søgning frem. Her skriver du softwarecenter og klikker på **MacSDU Software Center**.

I venstre side i listen trykker du på Updates og derefter Check for updates i højre hjørne. Nu søger den efter opdateringer og alle der kommer frem skal du installere.

Når den er færdig, skal du fortsætte med nedenstående.

Åben linket her <https://office-reset.com/macadmins/> og tryk på License Reset Package (Se nedenstående billede).

Så går den igang med at downloade en fil du skal udpakke og køre installation filen.

Office-Reset
Designed to troubleshoot and fix Microsoft Office for Mac errors

Overview Frequently Asked Questions Examples **For Mac Admins** Legal Changelog

Welcome Mac Admins!
The Office-Reset tool was designed to work in both consumer and commercial environments. At its most basic level, Office-Reset is simply a collection of payload-less packages that run a series of Terminal commands via zsh. All of these are wrapped into a distribution package which is both signed and notarized.

Download options
The standard download package is designed to run interactively via the installer GUI. This is a good option for first line technicians that are remoted directly into the users' desktop. If you're looking for a version of the tool to publish in your Self Service catalog, you have a number of options. Typically, you would want to advertise the Factory Reset Package and/or Complete Removal Package. If you need something more granular, you can download app-level reset packages from this page. The scripts are identical across all packages, but the Distribution.xml has been modified so that the appropriate checkboxes are pre-selected for command-line execution via sudo installer. If you have a specific customization need, you can use the `applyChoiceChangesXML` method, or modify the Distribution.xml and re-package.

Factory Reset vs. Complete Removal
Factory Reset removes all user-preferences, group and per-app containers. It removes temporary caches, keychain entries and mailbox content. Essentially, it just leaves behind the app bundles in /Applications and supporting tools such as MAU and computer-level agents. Complete Removal goes one step further by also removing apps, launch agents/daemons, and MAU. It is designed for scenarios where you want to completely remove every trace of Office from a Mac, such as a lab computer where you're performing version and UI behavior testing. Use <https://macadmins.software> to find specific builds of Office.

Automatic generation detection
The tool has automatic detection for Office 2016, 2019, and 2021 generations - which also includes Office 365 support. The tool understands both CDN and Mac App Store-based installs. If the tool detects that the Mac is running an ancient build such as 16.9, it will automatically update it to the latest 16.16 build, which is of the same 2016 generation. Alternatively, a Mac running Office 16.24 will be updated to the latest modern generation build. In other words, the tool won't invalidate a license by downloading

Downloads - v1.9

- Factory Reset Package
- Complete Removal Package
- Word Reset Package
- Excel Reset Package
- PowerPoint Reset Package
