# Cropping of images in Skyfish

Begin with finding the image you wish to crop.

Click on **the brush-icon/edit image**.

The editing tool opens.

Templates have been created for the formats used on the website (sdu.dk). Choose the relevant template , such as an article page.
It is of course also possible to enter other dimensions if the image is to be used for a purpose other than sdu.dk.

Now you can frame the part of the image you want to use.
And then click **Apply**.

The cropped image is now in the correct format.
Click **Download** to download it to your computer. It can then be uploaded to the media library in Sitecore.

When **Download** is clicked, the image returns to its original state and you can make another crop to one of the other formats immediately.
