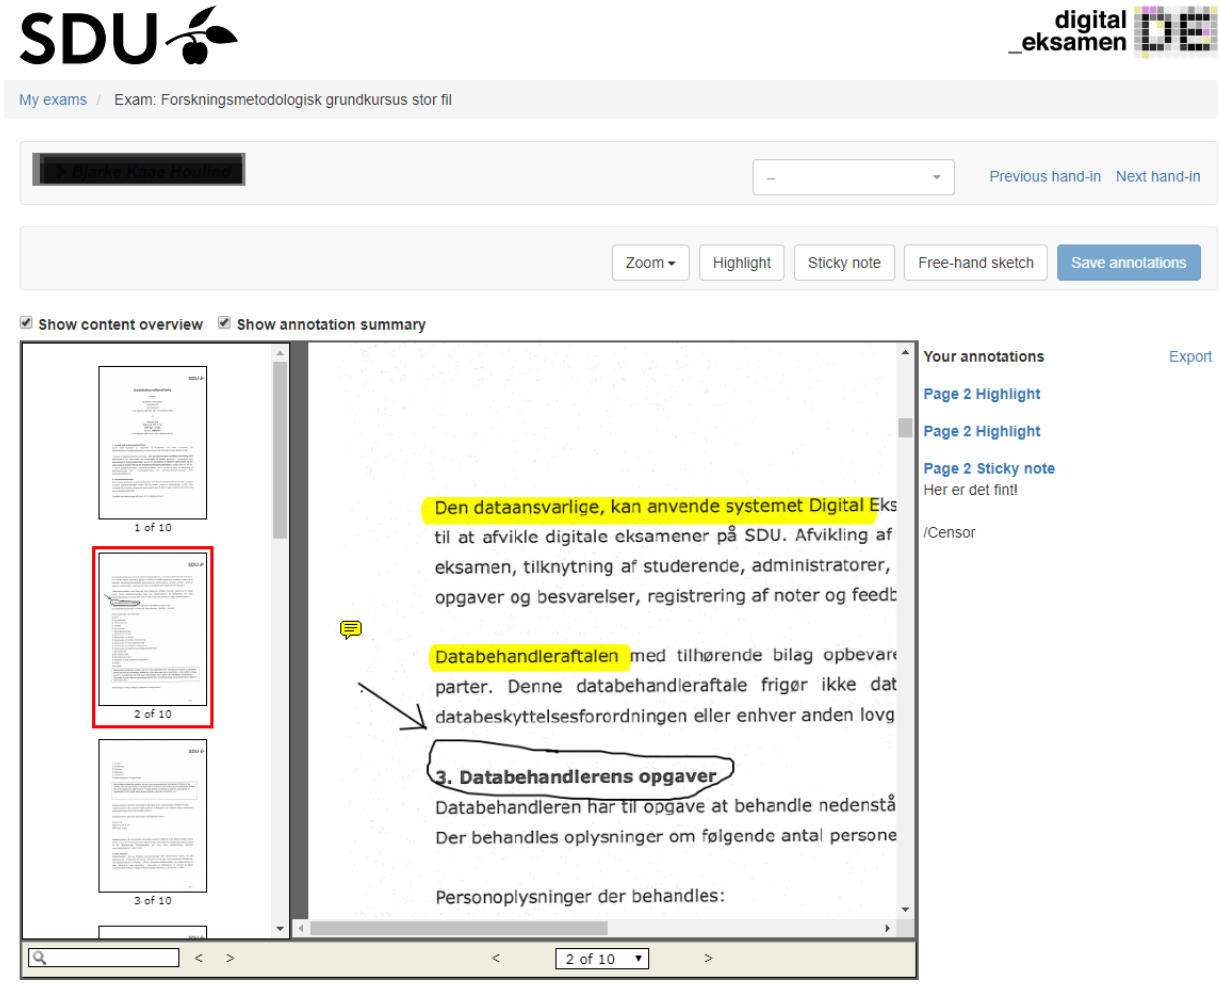
Annotation tool

If you open the students' assignment through "Read in browser" you will open the annotation tool.



You have the following options in the annotation screen:

- You can use "Highlight", that works like a yellow marker
- You can use "Sticky note" that works like a post-it note.
- You can make a "Free-hand sketch" and select a tool.
- In order to delete an annotation, right click on the annotation and select "Delete annotation"
- The system will automatically save your annotations. The 'Save' button can therefore not be activated.
- You can switch between showing or hiding the table of contents to the left of the document by unchecking or adding the checkmark.

- You can switch between displaying or hiding the annotations list to the right of the document by removing or adding the checkmark.

- You can switch between the zoom levels by pressing the button here.

- You have the option of submitting a provisional character from the dropdown menu here.

- You can go back to the hand-in before the current or the next hand-in respectively. Remember to save your changes before doing so.

- You have the option of viewing the details of any answer, e.g. reply information and contact information on co-examiners by clicking the name or group number. You can also download the assignment, cover or any appendices here.
